

Captur

Unlock the true value of your documents!

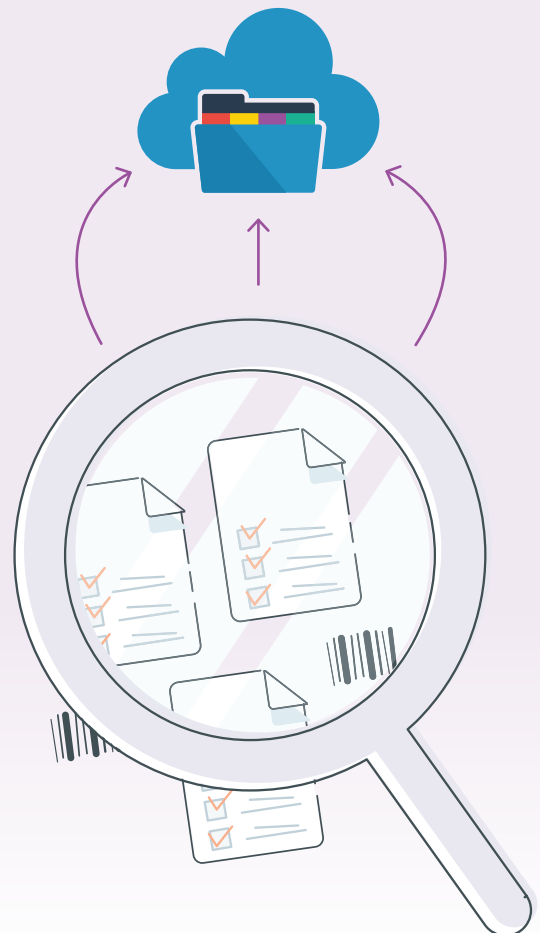

Captur extends Foldr's Document Management capability by adding automated document recognition and data extraction.

Using powerful template tools Captur identifies documents and data by location on a page, by identifying markers, spotting data patterns or even reading barcodes or check boxes.

Because Captur can be applied to any storage attached to the Foldr platform it offers the unique ability to recognise and extract data on legacy documents without moving, alteration or duplication.

Captur helps businesses to implement features of a larger-scale DMS without the associated costs.

Automated recognition and data extraction

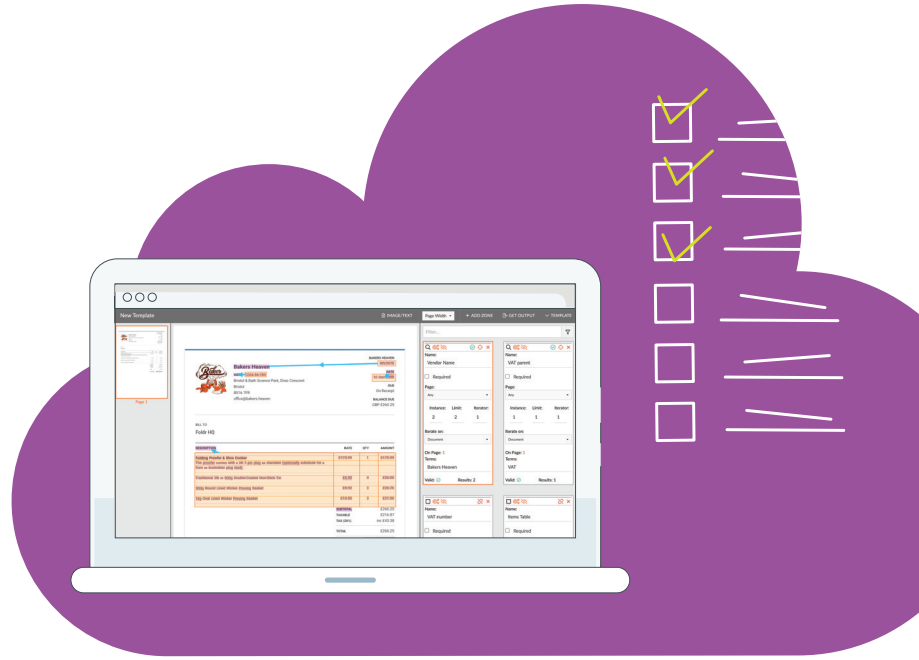

... extract text, identify markers, data patterns, read barcodes or check boxes

Captur

Low-cost document management solution

↳ Captur creates portable templates

Captur allows businesses to take advantage of their existing business infrastructure, so there's no need to pay additional ECM storage on top of a business's cloud and on-premise locations.

In addition to this, Captur can be used to apply metadata fields to contextual data fields to your existing file storage (including Azure, OneDrive, DropBox, SharePoint and Google Drive)

... making it a low-cost document management solution that's a truly unique product!

Captur feature list:

- Zonal OCR
- Barcode and data code recognition
- Regex
- Line-item extraction
- OMR (optimal mark recognition)
- Unique 'in place' recognition and extraction
- Portable templates
- Default field values

↳ Connect all of your existing/ on-premise storage & link to all cloud storage providers
