Reasons to adopt Foldr

and bridge the divide between on-site and cloud-based storage

1. Access to your files and folders whether on-premise or in the cloud, from a single location. Users working on site or from home can access their files anywhere, anytime.

2. Foldr has native apps for all your devices (Web app, iOS, Android, Windows, Mac).

3. Collaborate and share easily. Foldr presents all your storage locations in one unified interface. You can share and collaborate on files regardless of location.

4. Foldr enables security and data protection:
a. Maintain control of your on-premise files and folders.
b. Granular access control including two-factor authentication.
c. End-to-end encryption of data and integrity.
d. Compliance with detailed audit trails on activity.

5. Foldr can provide SSO services by being the Identity Provider and central point for SAML-enabled applications or by being a part of an existing SAML Identity provision solution.

6. Files spread across multiple storage areas are easier to find using the powerful search functionality which can index across traditional storage and cloud storage systems.

7. Easy to deploy:
a. A lightweight virtual appliance built for any popular Hypervisor.
b. Installed in minutes, with a low system requirement: 1vCPU, 2GB Ram, 50GB disk space for the base system.
c. Integrates with Active Directory or can be configured to provide appliance-based accounts for smaller networks.
